

Global EMC have sold and installed ferrite tiles for 20 years and have an in depth understanding of how they work and what performance they will give in use.

The ferrite tiles Global EMC offer are recognised as being the best in the world and are used in compliant EMC anechoic test chambers with repeatable results.

Ferrite tiles have a useable performance range of 30-1000MHz and are always required where the wavelength is too long for normal pyramidal absorbers to work (30-80MHz)

### **Specifications:**

Size – 100mm x 100mm x 6.7mm thick

Weight – 30Kg/m<sup>2</sup>
